

## Ladder Tool Tray

Sometimes I spend more time climbing up and down a ladder getting tools than I do working on the job itself. So to keep my tools within easy reach, I attached a plywood tray to the top of my ladder, as you can see in the photo.

I drilled a variety of hole sizes in the tray to accept the tools I use most often. And to keep loose items from rolling off the tray, I created a lip by adding wide edging to three of the edges, as shown in the drawing below.

I attached the tray to the ladder with a pair of hinges. To support the tray in the open position, I created a wood turn button. When you're ready to store the ladder, just flip the tray over on to the top of the ladder.
